

## Revamping of data platforms and tools, turndown of Ignition.geotab.com

As a direct result of the evolution of our data properties and assets, and in keeping with our goal to provide a seamless and integrated end-to-end customer experience, Geotab® will be revamping our data platforms, as well as our website and is **announcing the turndown of the legacy [Ignition platform](#), which will no longer be supported as of August 15th, 2022.**

To clarify, although the Ignition platform will be decommissioned and will no longer be supported, Geotab, as always, remains committed to offering the best-in class data access and platforms to help enable smarter decisions. Whether you are looking for planning insights on your next infrastructure project or electrifying your fleet, we have you covered.

### Paving the way to greater insights

While the Ignition platform is being decommissioned it has paved the way for new and improved product innovations including:

- [Active Insights](#) — Active Insights is your AI Fleet Manager inside [MyGeotab](#) that learns about your fleet and suggests areas where you can improve performance in safety, reliability, and efficiency.
- [Analytics Lab](#) — Analytics Lab is a testing environment that allows fleet customers and partners to engage with and influence the direction of Geotab's data solutions.
- [Altitude](#) (U.S. & Canada only) — The transportation analytics platform that enables more efficient movement of goods and people. Powered by deep and scalable transportation data: intersections, roads, origins & destinations.
- [Citizen Insights](#) (U.S. & Canada only) — Geared towards primarily government agencies, a public-facing website solution to display the status of vehicles, as well as operational status of activities including winter maintenance, garbage collection, and patrolling. Future data layers including weather, temperature, camera feeds, and other aggregated insights will be added soon.

### Resources and contact information

For additional information on any of our data platforms or for further information on the decommissioning of [ignition.geotab.com](#), please contact your Partner Account Manager.
